

EDUCATION

Munster Technological University September 2023 -September 2024

Master of Science in Data Science and Analytics

Relevant Coursework:

Python, applied statistics, R language, Data Management Systems, Applied Machine Learning, Statistical Data Analysis, Distributed Data Management, Research Methods, Data Analytics & Visualisation, Time Series & Factor Analysis, Research Project -Data Science

Mukesh Patel School of Technology July 2019 - May 2023

Bachelor of Technology in Electronics and Telecommunication 2.96 /4 CGPA

Relevant Coursework:

Digital Electronics, Signals and Systems, Digital Signal Processing, Telecommunication Networks, Control Systems, Embedded Systems, Wireless Communication, Antenna Theory and Design, Optical Communication, Digital Communication, Internet of Things.

MIT Vishwashanti Gurukul World School July 2017 - July 2019

International Baccalaureate (IB)

MIT Vishwashanti Gurukul World School July 2015 - March 2017

International General Certificate of Secondary Education (IGCSE)

SKILLS

Languages: Python, SQL, R

Softwares: AutoCAD, SolidWorks, OnShape, Microsoft office Suite, Tableau, Anaconda/Vscode, PowerBI, R studio

OS: Windows, Linux, MacOS

Computer Vision Techniques: Machine Learning, Image processing, Object detection

Hardware: Raspberry Pi, Arduino

EXPERIENCE

Data Science Intern August 2022 –September 2022

Aican Automate

Mumbai, India

- Applied appropriate data science techniques to solve business problems.
- Shadowed database personnel to learn new methods to achieve job duties.
- Created data visualization graphics, translating complex data sets into comprehensive visual representations.

Game Developer Intern

May 2022-July 2022

Being Digital

Surat, India

- Responsible for designing, developing, and coding the underlying engine based on design ideas, while also working on tasks such as level design, animation, character design, and unit testing.
- Gained knowledge of unity's workings and going through several stages of development
- Gained hands-on experience in data science and Python programming through an immersive internship program.
- Developed game-related tools and scripts to facilitate game development.

PROJECTS

Traffic Signals detection using Machine Learning:

June 2024 -August 2024

- Developing a machine learning application capable of recognizing and interpreting traffic signals in real-time. Employing a convolutional neural network (CNN) to process visual data from urban traffic signs in Europe, enhancing the project's applicability to real-world environments.
- This project is aimed at integrating deep learning techniques with practical traffic management solutions, expected to contribute to advancements in autonomous driving technology.

Captcha Detection using Machine Learning:

February 2024 -May 2024

- Developing a machine learning solution to automatically solve captcha challenges, demonstrating the potential of AI to reliably interpret distorted text and images.
- Utilizing image preprocessing techniques and neural network architectures to achieve high accuracy rates in captcha recognition. This initiative not only showcases the adaptability of machine learning models to diverse visual patterns but also aims to enhance security measures by assessing the difficulty of initial captcha systems.

Miniature Model of Autonomous Vehicle using Raspberry Pi:

August 2022 -April 2023

- Designed and 3D printed an autonomous miniature car with a Raspberry Pi as its brain. Integrated a camera and ultrasonic sensor for data collection, enabling autonomous navigation using computer vision techniques.
- This comprehensive project encompassed hardware integration, software development, computer vision, sensor technology, and 3D printing to achieve autonomous vehicle capabilities at a miniature scale.

Object detection on Raspberry Pi:

January 2022 – April 2022

- Executed a Raspberry Pi project focused on Object Detection using TensorFlow and OpenCV. This entailed training a highly accurate object detection model, highlighting the Raspberry Pi's real-world potential in merging machine learning, computer vision, and hardware.

Super Capsule Game:

May 2022-June 2022

- Developed a Unity game that combined obstacle courses and platformer elements with a coin collection system. Responsible for concept, design, coding, and game mechanics, enhancing my Unity development and immersive gameplay expertise.

CERTIFICATIONS

- Python and Data Science certificate
- Graphic Designing
- Photoshop training
- Illustrator 2021 Essential Training
- Android Development: Retrofit with Java
- Motion Graphics
- Kotlin Essential Training

Hobbies

- Football
- Listening Music
- Arts
- Esports
- Chess
